UK offers £10m for off-grid EV charging technology

The UK government announced a £10 million competition (3 Nov 2025) via Innovate UK to fund cutting-edge off-grid EV charging technologies for England’s motorways and major A-roads, with applications open until 25 March 2026. Projects must enable at least 12 EVs to use ultra-rapid charging; the move follows a £650 million Electric Car Grant that has helped over 25,000 drivers with discounts up to £3,750.
