Stony Brook researchers improve redox flow battery storage

Stony Brook University researchers, working with Purdue University, published a study on improving redox flow batteries for renewable energy storage. They found lithium-based ferrocyanide could be six to eight times more soluble than sodium- or potassium-based versions under strongly alkaline conditions.

UK Energy Independence Bill targets cheaper bills and clean power

The UK government has introduced the Energy Independence Bill to Parliament to cut household bills, expand consumer protections, and accelerate clean energy and grid reforms. The bill includes plans to scrap gas standing charges, shift 75% of domestic Renewables Obligation costs to public spending, require community stakes of up to 20% in new renewable projects, and end new North Sea oil and gas licences.
